SANTHOSH V

AI Engineer | LLMs, Agentic Pipelines & Applied Machine Learning
Chennai, India | 9361528748 | santhosh2210429@ssn.edu.in | linkedin.com/in/santhosh-v-286a28319 | github.com/santhosh290605

PROFESSIONAL SUMMARY

Full Stack Developer with 1+ year of production software engineering experience in Python and Java at a financial-services (structured-finance) platform, with IEEE-published (SCOPUS indexed) research applying machine learning, LLMs, and agentic AI to automated financial decisioning. Built and productionized an agentic pipeline using LangGraph that replaced a manual script for platform performance analysis, and is building an LLM-powered developer assistant with prompt engineering and guardrails. Trained and evaluated a CatBoost model (AUC 0.8779) with SHAP explainability and retrieval-augmented generation (RAG). Comfortable with cloud platforms (AWS, Azure), distributed data infrastructure (MongoDB, PostgreSQL, Redis), and building/evaluating models and tools against quantifiable metrics. AWS Certified AI Practitioner. 900+ DSA problems solved.

TECHNICAL SKILLS

Languages: Python (primary), Java, JavaScript, SQL
AI / ML / LLM: Large Language Models (LLMs), Prompt Engineering, Agentic AI, LangGraph, Multi-Agent Systems, Retrieval-Augmented Generation (RAG), Machine Learning, Model Evaluation, Explainable AI (SHAP)
Cloud Platforms: AWS (Certified AI Practitioner), Azure (Service Bus), Google Cloud
Data & Infrastructure: MongoDB, PostgreSQL, MySQL, Redis, Data Pipelines, Distributed Systems, Asynchronous Processing
Software Engineering: Spring Boot, FastAPI, REST API Design, Microservices, Docker, Kubernetes, Git/GitHub, CI/CD, GitHub Actions, Jenkins
Practices: Quantitative Evaluation, Unit Testing (JUnit, Mockito, Jest), Debugging, Code Review, Agile/Scrum, Technical Documentation, Cross-Functional Collaboration, Stakeholder Communication

PROFESSIONAL EXPERIENCE

Full Stack Developer **Jan 2026 – Present**
Intain Markets (Intain), Chennai | *Digital structured-finance marketplace*

- Built an agentic pipeline using LangGraph that replaced a manual script, automating performance analysis across the platform and removing a recurring manual workflow for the engineering team.
- Building an LLM-powered developer assistant with prompt engineering, integrated into the pull-request workflow to flag risky changes and draft fix suggestions, under human review before any change is applied.
- Built and integrated 50+ REST API endpoints and data pipelines across distributed backend services spanning MongoDB, PostgreSQL, and Redis, supporting payment-settlement and capital-markets workflows.
- Implemented asynchronous, event-driven processing with Azure Service Bus: session-enabled queues for ordered per-entity work across Kubernetes replicas and request/reply queues, with idempotent consumers and durable job state.
- Diagnosed cross-service production issues to root cause and shipped fixes; collaborated with Product, QA, and Engineering stakeholders to turn business requirements into technical solutions in 2-week Agile sprints.
- Cut CI build time 60% (5 min to 2 min) through performance profiling and an esbuild migration on a multi-team monorepo.

Backend Developer Intern **May 2025 – Jul 2025**
Stratforge, Chennai

- Designed modular backend services with FastAPI, Tortoise ORM, and PostgreSQL for enterprise data and resource-management systems; built asynchronous REST APIs with role-based access control.
- Containerized services with Docker and implemented Prometheus/Grafana monitoring to measure system performance and resource usage against quantifiable metrics.

PROJECTS & RESEARCH

Multi-Agent Financial Decision Framework (IEEE Publication, SCOPUS Indexed, 2025) | *Python, CatBoost, SHAP, RAG*

- Designed an agentic AI pipeline for automated credit decisioning in a secure, transparent multi-agent framework; trained and evaluated a CatBoost model reaching AUC 0.8779, with SHAP explainability and RAG for grounded, auditable outputs.

AI Open Source Contributor Agent | *n8n, GitHub API, LLM Integration*

- Built an LLM-driven automation that analyzes GitHub issues, generates candidate code fixes, and proposes pull requests through the GitHub API.

PayLite: Digital Wallet & Transaction Ledger API | *Java, Spring Boot, PostgreSQL, Redis, JUnit, Mockito*

- Built ACID-compliant, idempotent wallet-transfer REST APIs with Spring Data JPA and Redis-cached balance lookups; unit tested with JUnit and Mockito.

EDUCATION & CERTIFICATIONS

B.Tech, Information Technology – Sri Sivasubramaniya Nadar College of Engineering, CGPA 8.0/10 **2022 – 2026**

- AWS Certified AI Practitioner (2025); Google Cloud Computing Foundations.
